Versalux glass is designed to filter out the sun's heat and UV rays, promoting energy efficiency and reducing fabric fade. It is ideal for commercial and residential applications.

Versalux R is created by applying a pyrolytic coating to Versalux tints to enhance solar performance. The glass can be fabricated and post-heat-treated without damaging the reflective surface.

Versalux 2000 products are available in blue, green, and grey; they provide deeper colors and enhanced solar performance compared to standard Versalux tints.

Versalux 2000 R is created by applying a pyrolytic reflective coating to Versalux Blue 2000 and Green 2000.

Versalux 2000 T is produced by applying a titanium based pyrolytic coating to Versalux Blue 2000 and Green 2000 to further enhance performance. The coating is less reflective than the R coatings.
